Fall is our prime planting season, perfect for planting Mediterranean shrubs, spring annuals and winter vegetables. Our weather has cooled enough so transplanted plants are less stressed, moisture does not transpire too fast from the leaves for the roots to match through uptake from the soil. With low sun, and shorter days plants will put energy into root growth allowing for dramatic spring growth in future months.

A New Leaf  
Status:  
We are very excited about our NEW New Leaf page....

Fall is the time to repair your lawns. Dead or thin patched should be over seeded or patched with new sod pieces. Aeration of your lawns will reduce thatch, improve drainage and loosen soil. Fall is the time to aerate cool season grasses such as TALL FESCUE. Leave aeration of the warm season grasses such as ST. AUGUSTINE and BERMIUDA until Spring.
